Prostate NGS Fusion Panel

Alternative Name

Prostate Fusion Panel

Methodology

Molecular

Test Description

The Prostate NGS Fusion Panel is an RNA-based next-generation sequencing panel that detects translocations and fusions with known and novel fusion partners of these genes: ACSL3, BRAF, CANT1, DDX5, ERG, ESRP1, ETV1, ETV4, ETV5, EWSR1, FLI1, FOXP1, HERPUD1, HMGN2P46, HNRNPA2B1, KLK2, KRAS, NDRG1, NTRK1, NTRK2, NTRK3, RAF1, RET, SLC45A3, SNURF, TMPRSS2, and UBTF.

Clinical Significance

The Prostate NGS Fusion Panel is intended to detect gene fusions associated with prostate cancer to aid in diagnosis and prognosis of the disease.

Gene fusions play critical roles in the development and progression of prostate cancer, and have been used as molecular biomarkers for diagnosis of the malignant disease. Approximately 50%-60% of prostate cancers harbor recurrent gene fusions, typically involving members of the ETS family of transcription factors (ERG, ETV1, ETV4, and ETV5). TMPRSS2-ERG is the most common fusion in prostate cancer, serving as a driver of prostate cancer progression. NTRK fusions are rare, but testing is of high interest due to possible treatment with specific TRK inhibitors (entrectinib, larotrectinib).

Specimen Requirements

- **FFPE tissue:** Paraffin block is preferred. Alternatively, send 1 H&E slide plus 5-10 unstained slides cut at 5 or more microns. Please use positively-charged slides and 10% NBF fixative. Do not use zinc fixatives.

Storage & Transportation

Use cold pack for transport, making sure cold pack is not in direct contact with specimen.

NeoGenomics Laboratories is a specialized oncology reference laboratory providing the latest technologies, testing partnership opportunities, and interactive education to the oncology and pathology communities. We offer the complete spectrum of diagnostic services in molecular testing, FISH, cytogenetics, flow cytometry, and immunohistochemistry through our nation-wide network of CAP-accredited, CLIA-certified laboratories.

Committed to research as the means to improve patient care, we provide Pharma Services for pharmaceutical companies, in vitro diagnostic manufacturers, and academic scientist-clinicians. We promote joint publications with our client physicians. NeoGenomics welcomes your inquiries for collaborations. Please contact us for more information.
