## PDGFRA Amplification

### Alternative Name

PDGFR Alpha Amplification

### Methodology

FISH

### Test Description

**Probes:** PDGFRA (4q12) | Centromere 4

**Disease(s):** Brain cancer

### Clinical Significance

Amplifications of PDGFRA as detected by FISH occur in approximately 30% of pediatric and 20% of adult high-grade astrocytomas. In de novo adult glioblastoma multiforme (GBM), the co-occurrence of PDGFRA amplification with IDH1 mutation is associated with significantly worse overall survival compared to patients negative for amplification. Clinical trials with tyrosine kinase inhibitors targeting activated or over-expressed PDGFRA are in progress.
